COUNTY

Woodstoves

Do I Need A Permit For A Woodstove?

A Building Permit is required for a woodstove inside a building as it is a solid fuel burning appliance and must comply with the Ontario Building Code for clearances from combustible materials.

(Ontario Building Code references 9.21.1, 9.22.10, 9.33.1)

A Building Permit is not required for outdoor furnaces if the building in which they are enclosed is under 108sqm. A secondary source of heat for a dwelling unit is not required if an outdoor furnace is used as the primary source of heat.

Required Documents For A Woodstove Permit Application

- Application to Construct or demolish
- Copy of make or model of the stove and chimney(manual)
- Proof of ULC# or CSA#, also located on the plate on the back of stove
- Copy of page from manufacturers manual that lists the clearances required and heat shield requirements
- Verification of WETT certification from your installer
